Revision to the DMO Financing Remit 2026-27

23 April 2026

Contents

Section 1	Introduction	1
Section 2	Revision to the DMO's financing remit for 2026-27: implementation	2
Annex A	Planned split of gilt issuance by type, maturity and issuance method in 2026-27	10
Annex B	Planned gilt auction calendar in 2026-27	11
Annex C	Financing arithmetic in 2025-26 and 2026-27	12
Annex D	Illustrative gross financing projections from 2027-28 to 2030-31	13

Section 1

Introduction

- 1.1 The UK Debt Management Office's (DMO's)¹ financing remit for 2026-27 has been revised by HM Treasury today. This financing remit announcement sets out further details of the DMO's implementation plans.
- 1.2 Ahead of each financial year, HM Treasury sets the DMO's financing remit for the forthcoming financial year. This is formally set out in the 'Debt Management Report'², which is published in accordance with the requirements of the Charter for Budget Responsibility³.
- 1.3 The financing remit explains how the DMO will finance the projected Net Financing Requirement (NFR). In particular, it details plans for the split of gilt sales by type and maturity. These include:
 - The split between short-, medium-, and long-dated⁴ conventional gilts
 - The split between conventional and index-linked gilts
 - The total amount of financing to be raised via the issuance of green gilts
 - An initially unallocated portion of issuance, through which gilts of any type or maturity may be sold via any issuance method
- 1.4 The financing remit also: (i) shows the planned split between gilt distribution methods; (ii) explains whether, and the extent to which, issuance of Treasury bills is planned to make a net contribution to debt financing; and (iii) contains provisions relating to revisions to the NFR.
- 1.5 The financing remit is typically revised in April each year (to reflect outturn data from the previous financial year) and as the Office for Budget Responsibility (OBR) publishes subsequent fiscal projections⁵. Any such in-year revisions will be announced transparently to the market.
- 1.6 This financing remit announcement by the DMO provides more detail on how the DMO will implement the financing remit during the rest of the financial year, with a calendar of planned auction dates and gilts to be issued in Q1 2026-27⁶.

¹ The DMO is an Executive Agency of HM Treasury, which is responsible for debt and cash management on behalf of the UK government.

² This can be accessed on the 'Financing Remit' page of the DMO website, at: <https://www.dmo.gov.uk/responsibilities/financing-remit/full-details/>.

³ The latest version of the Charter for Budget Responsibility can be found at: <https://www.gov.uk/government/publications/draft-charter-for-budget-responsibility-autumn-2025>.

⁴ Maturities are defined as follows: short (0-7 years), medium (7-15 years), and long (over 15 years).

⁵ Remits may also be revised at other times in exceptional circumstances.

⁶ The DMO published the Q1 2026-27 gilt operations calendar on 20 March 2026, which can be found at: <https://www.dmo.gov.uk/media/zdebgm25/pr200326.pdf>.

Section 2

Revision to the DMO's financing remit for 2026-27: implementation

- 2.1 The DMO's financing remit has been revised on 23 April 2026 following publication by the Office for National Statistics of the 2025-26 outturn Central Government Net Cash Requirement (excluding NRAM Ltd, Bradford & Bingley, and Network Rail) (CGNCR (ex NRAM, B&B, and NR)).
- 2.2 The full details of the DMO's financing remit plans for 2026-27, including operational aspects, are set out below.

DMO's Net Financing Requirement

- 2.3 The revised Net Financing Requirement (NFR) for the DMO in 2026-27 is forecast to be £251.2 billion; this represents a £5.9 billion reduction from £257.1 billion as announced at Spring Forecast in March 2026. This will be financed by gilt sales of £246.2 billion (including planned green gilt sales of £12.0 billion) and a net contribution made by Treasury bills for debt financing of £5.0 billion, which is unchanged relative to the net contribution announced at Spring Forecast 2026.

Gilt sales

- 2.4 The planned gross gilt sales of £246.2 billion will be met through a combination of:

- 2.4.1 £174.4 billion of issuance (70.8% of total sales) in 53 auctions, with a planned split as follows⁷:

- | | |
|---|------------------------------|
| • Short conventional | £95.0 billion in 20 auctions |
| • Medium conventional (including green) | £56.0 billion in 15 auctions |
| • Long conventional | £7.4 billion in 5 auctions |
| • Index-linked | £16.0 billion in 13 auctions |

- 2.4.2 Syndications represent a flexible tool to raise funds in alignment with demand and market conditions. The current plan for syndications is to raise approximately £42.0 billion (17.1% of total sales) in seven syndicated transactions as set out below via:

⁷ Figures may not sum due to rounding.

- £20.0 billion of medium conventional gilts in two transactions
- £15.0 billion of long conventional gilts in three transactions
- £7.0 billion of index-linked gilts in two transactions

2.4.3 However, the planned number of syndications within each maturity category and, therefore, the total amounts raised in each category may vary depending on demand and market conditions and taking into account whether any dual-tranche syndications are undertaken.

2.4.4 £29.8 billion (12.1% of total sales) from an initially unallocated portion of issuance, which can be used to issue any maturity of conventional gilt and index-linked gilts via any issuance method. Proceeds from the DMO's programmatic gilt tenders will be drawn down from this portion (see paragraphs 2.20 to 2.23). The unallocated portion of issuance is, in general, intended to facilitate remit delivery by permitting gilt supply to be tailored more responsively to market demand and also to in-year developments in the gilt market.

2.5 The planned split of gilt issuance by type, maturity and issuance method is set out in Annex A. However, in order to ensure successful delivery of the financing programme in 2026-27, both the split of issuance and the mix of distribution methods used to deliver it may vary during the year:

- The overall split of issuance by maturity and type of gilt is likely to be affected by the DMO's issuance decisions during the financial year, taking account of market feedback and the use of the initially unallocated portion of issuance. Consequently, the overall split of issuance by the end of the financial year may depart from the plans published as part of the remit revision.
- The DMO may, at any time during the financial year, make alterations to the amounts of financing that it plans to raise through each issuance method. This may include changes to the size of the unallocated portion of issuance during the financial year, for example as a result of the DMO's decisions on the sizes of syndicated offerings and/or the scheduling of gilt tenders.
- Proceeds raised following the final transaction of each syndication programme may also vary from the planned total for each programme (see also paragraph 2.16).

2.6 Any changes in the breakdown of planned gilt issuance either by type, maturity and/or issuance method will be reported in the normal way, including alongside updates to the financing remit (for example at any future fiscal event) and at quarterly intervals (see also paragraphs 2.9 and 2.10). However, changes may

also be announced at other times, including following individual syndicated offerings.

Green gilt issuance

- 2.7 Green gilt issuance of £12.0 billion (cash) is planned in 2026-27, subject to demand and market conditions⁸. The DMO expects that the focus of green gilt issuance in 2026-27 will be on re-opening, and building to benchmark size, 4⁵/₈% Green Gilt 2037, subject to demand and market conditions following its launch via syndication in March 2026. This approach will be kept under review taking into account market conditions.

The planned gilt auction calendar

- 2.8 The planned gilt auction calendar in 2026-27 is set out in Annex B. The DMO will size gilt auctions on a case-by-case basis, taking into account the type and maturity of gilt to be sold and prevailing market conditions. The nominal size of each gilt auction will typically be announced one week before the date of the auction.

Changes to the planned gilt auction calendar

- 2.9 The DMO's general intention will be to implement the planned gilt auction calendar set out in Annex B, whilst recognising the importance of allowing, through in-year adjustments to the calendar, scope to respond appropriately to unforeseen or changing circumstances. Hence, the planned gilt auction calendar may be altered, for example, to accommodate the Chancellor of the Exchequer's decisions on the fiscal event timetable, any significant data releases or market sensitive events announced subsequently, and/or to accommodate the scheduling of syndicated offerings. If the gilt auction programme raises proceeds which are higher than expected, this may allow for the cancellation of one or more gilt auctions. The DMO will provide the market with prior notice of any alteration to the planned gilt auction calendar.
- 2.10 The planned gilt auction calendar may also be changed on a quarterly basis following consultation with the market. Any such changes to the planned gilt auction calendar for the forthcoming quarter would be set out as part of the DMO's quarterly issuance announcement. The reasons for any changes to the auction calendar may include an alteration to the assumed mix of issuance methods to deliver the planned financing by gilt type and maturity in the forthcoming quarter.

⁸ The UK Government Green Financing Framework was updated in November 2025 and can be found at: <https://dmo.gov.uk/media/i2lk0loa/pr261125.pdf>.

The syndication programme

- 2.11 Any type and maturity of gilt can be sold via syndication and the DMO will announce on a quarterly basis its planned syndication programme. Dual tranche syndications will continue to be under consideration.
- 2.12 Any impact on the planned mix of distribution methods used to deliver the financing programme will be reported by the DMO.
- 2.13 The DMO's current planning assumption is that it will hold seven syndicated offerings (five of conventional gilts and two of index-linked gilts) in 2026-27. The planned number of syndications within each maturity category and, therefore, the total amounts raised in each category may vary depending on demand and market conditions and will also take into account whether any dual-tranche syndications are undertaken. The DMO will provide updates on the progress of the syndication programme in press notices announcing the result of each transaction and in its quarterly issuance calendar announcements. Each syndicated offering will be sized having regard to the amount and quality of investor demand in the order book.
- 2.14 Where the unallocated portion of the gilt issuance programme is used to increase the size of syndicated offerings, the unallocated portion will be reduced accordingly. In any case where the DMO decides to raise, via a syndicated transaction, proceeds that fall below any assumed even-flow amount, the shortfall may be transferred from the syndication programme to increase the size of the unallocated portion of gilt issuance (see also paragraph 2.5).
- 2.15 If the DMO decides to make a transfer between the unallocated portion of gilt issuance and the syndication programme, it will publish any such transfer(s) no later than in the subsequent quarterly gilt issuance calendar announcement during the financial year. However, if any decisions to make transfers are taken after the publication of the issuance calendar for the final quarter of the financial year, they will be included as part of the relevant announcement by the DMO of the specific syndication result.
- 2.16 In order to maintain the operational viability of syndicated offerings at the end of each programme, the overall size of the syndication programmes (conventional and/or index-linked) may be increased by up to 10% (in cash terms) of the total size of the respective planned conventional and/or index-linked syndication programme at the time of the final non-green syndicated offering of each type.

Gilt tenders

- 2.17 Gilt tenders may be used to assist with delivery of the financing remit. Gilt tenders may also be used for market management reasons.
- 2.18 The DMO will consider a range of factors in deciding the gilt to be offered at each individual tender, including feedback about demand and market conditions, as well as broader debt management considerations (including value for money and the impact of issuance on the near-term redemption profile).
- 2.19 Gilt tenders will be sized by the DMO on an operation-by-operation basis but will generally be smaller than an auction of a gilt with a comparable maturity.
- **Programmatic gilt tenders**
- 2.20 The DMO will continue to use programmatic gilt tenders in 2026-27 to assist with the delivery of the financing remit. It is envisaged that these operations will typically involve the sale of “off-the-run”⁹ gilts. However, the approach is designed to be adaptable to take account of the overall gilt financing programme, composition of the operations calendar and feedback received during the consultation process.
- 2.21 The DMO will announce the planned dates of these gilt tender operations (which may involve the sale of more than one gilt on these dates) as part of its quarterly gilt issuance calendar announcements and will typically include the type(s) and maturity sector(s) (for conventional gilts) of the gilt(s) to be tendered in each case, taking into account market feedback both ahead of each quarter and, with respect to the identity of the gilt(s) to be issued, closer to each tender date.
- 2.22 Market participants will be consulted on the identity of the gilt(s) and the maximum size(s) to be offered at each individual gilt tender ahead of the planned gilt tender date. The gilt(s), nominal size(s), and scheduled tender date will typically be confirmed at least two business days prior to the planned tender date.
- 2.23 Proceeds from the DMO’s programmatic gilt tenders will be drawn down from the unallocated portion of issuance. The DMO will publish any such transfers shortly after they take place by updating the table showing the evolution of the

⁹ In this context an ‘off-the-run’ gilt is any gilt that is not currently being built up to benchmark size as part of the current regular issuance programme.

unallocated portion of issuance in 2026-27 that is available on the DMO's website¹⁰.

- **Ad hoc gilt tenders**

- 2.24 Gilt tenders may also be scheduled ad hoc, and outside the programmatic use of gilt tenders, to issue any type and maturity of gilt, including for market management reasons.
- 2.25 The DMO will aim to announce the date, the choice of gilt to be sold and the maximum size of any ad hoc gilt tender(s) at least two business days in advance. Ad hoc gilt tenders may also be scheduled with shorter notice, as required, for market management reasons.
- 2.26 The choice of gilt to be issued at any ad hoc gilt tender will be determined on a case-by-case basis by the DMO, taking into account market feedback.

Post Auction Option Facility (PAOF)

- 2.27 In 2026-27 the DMO will continue to offer successful auction bidders (both primary dealers and gilt investors) an option to purchase additional stock (currently 25%) via the PAOF¹¹. Full details are set out in section 2.6 of 'Official Operations in the Gilt Market: An Operational Notice'¹².
- 2.28 Any amount of gilts sold via the PAOF in 2026-27 will, other things being equal, reduce the implied average sizes of auctions of the relevant maturity/type but the DMO may choose to offset some or all of any such reduction by transfers from the unallocated portion of issuance to the auction programme. The DMO will typically announce the details of any such transfers in the quarterly gilt issuance calendar announcements.

Switch auctions

- 2.29 As set out in the 'Debt Management Report 2026-27', the DMO may use switch auctions from 2026-27. Any such operations will be used to promote liquidity in certain gilts, including at benchmark maturities. The DMO will engage with market participants and update its Operational Notice with further details ahead of any such operation. The DMO does not currently envisage holding any such operations in Q1 2026-27.

¹⁰ This can be found under the 'Progress against the current remit' page at:

https://www.dmo.gov.uk/dmo_static_reports/currentremit.pdf.

¹¹ The PAOF will not be available at auctions of green gilts.

¹² The latest version of this notice was published on 1 April 2026 and can be found at:

<https://www.dmo.gov.uk/media/1grjjk40/opnot010426.pdf>.

Treasury bill sales

- **Debt management**

2.30 It is currently anticipated that Treasury bill sales for debt management purposes will make a net contribution of £5.0 billion towards meeting the NFR in 2026-27. Any changes to this plan would be announced as part of any future revision to the 2026-27 financing remit. The outturn net contribution of Treasury bills to debt financing in 2026-27 will be reported by the DMO in April 2027.

- **Exchequer cash management**

2.31 It is expected that Treasury bills issued for Exchequer cash management purposes will continue to play an important role in fulfilling the DMO's cash management objective. Treasury bills issued for cash management purposes will not contribute to the stock of Treasury bills issued to meet the NFR. Outturn information on the total stock of outstanding Treasury bills will continue to be published on the DMO's website, alongside information about the outturn stock of Treasury bills for debt financing purposes.

- **Consultation on expanding and deepening the Treasury bill market**

2.32 HM Treasury and the DMO launched a consultation on 5 January 2026 on expanding and deepening the UK Treasury bill market. The consultation closed on 27 February 2026. Any decisions arising from the consultation will be communicated in the 2026-27 financial year, with sufficient notice to give the market time to prepare.

Changes to the financing requirement

2.33 The 2025-26 and 2026-27 financing requirements have been revised relative to financing updates published at Spring Forecast 2026 following publication of the outturn Central Government Net Cash Requirement (excluding NRAM Ltd (NRAM), Bradford & Bingley (B&B), and Network Rail (NR)) (CGNCR (ex NRAM, B&B, and NR)) for 2025-26.

- **Changes to the 2026-27 financing requirement^{13,14}**

2.34 The £5.9 billion reduction in the NFR in 2026-27 takes into account:

- The outturn CGNCR (ex NRAM, B&B, and NR) for 2025-26, which is £8.8 billion lower than published at Spring Forecast 2026, falling from £144.7 billion to £135.9 billion.
- Changes in the net contribution to financing from NS&I: (i) a reduction in 2025-26 of £1.5 billion in NS&I's net financing contribution from £13.6 billion to £12.1 billion; (ii) a reduction in 2025-26 in NS&I Green Savings Bonds from -£0.3 billion to -£0.4 billion; and (iii) an increase in 2026-27 in NS&I Green Savings Bonds from -£0.2 billion to £0.2 billion.
- Outturn in 2025-26 for other financing items of -£0.7 billion.
- Outturn gilt sales being £0.2 billion higher than target at £303.9 billion and an outturn net contribution to financing from Treasury bills of £11.3 billion, £0.3 billion higher than the planned net contribution at Spring Forecast 2026.

2.35 As a result of the above, the DMO's net cash position at end March 2026 was £12.9 billion, £5.6 billion above that published at Spring Forecast 2026, with the result that the offsetting financing adjustment carried forward to 2026-27, at -£10.6 billion, is £5.6 billion lower than planned at Spring Forecast 2026.

Supplementary information

2.36 The planned split of gilt issuance by type, maturity and issuance method in 2026-27 is published at Annex A.

2.37 The planned gilt auction calendar in 2026-27 is published at Annex B.

2.38 The financing arithmetic for 2025-26 and 2026-27 is published at Annex C.

2.39 Illustrative gross financing projections from 2027-28 to 2030-31 are published at Annex D.

¹³ Figures may not sum due to rounding.

¹⁴ There was a £0.6 billion (cash) cancellation of 4½% Treasury Gilt 2027 in 2025-26, which reduced the gilt redemptions total in 2026-27 from £141.5 billion to £140.9 billion. In addition, financing via debt issuance in 2026-27 will take into account £0.7 billion (cash) of secondary market gilt purchases by the DMO in 2025-26 that were undertaken as part of its cash management activities. These purchases have the effect of further reducing the gilt redemption total in 2026-27 from £140.9 billion to £140.2 billion and, therefore, have no overall impact on the Net Financing Requirement in 2026-27.

Annex A: Planned split of gilt issuance by type, maturity and issuance method in 2026-27

	Auction	Syndication	Gilt tender	Unallocated	Total
Short conventional					
£ billion	95.0				95.0 38.6%
Medium conventional¹					
£ billion	56.0	20.0			76.0 30.9%
Long conventional					
£ billion	7.4	15.0			22.4 9.1%
Index-linked					
£ billion	16.0	7.0			23.0 9.3%
Unallocated					
£ billion				29.8	29.8 12.1%
Total £ billion	174.4	42.0	0.0	29.8	246.2
<i>Total per cent</i>	<i>70.8%</i>	<i>17.1%</i>	<i>0.0%</i>	<i>12.1%</i>	

Figures may not sum due to rounding.

¹ Including green gilt sales.

Annex B: Planned gilt auction calendar in 2026-27^{15,16}

Day	Date	Gilt type	Day	Date	Gilt type
Thursday	09-Apr-26	4 $\frac{1}{8}$ % Treasury Gilt 2033	Tuesday	29-Sep-26	Conventional

¹⁵ Operations shaded in the table above had already taken place as of Thursday 23 April 2026.

¹⁶ The DMO published the Q1 2026-27 gilt operations calendar on 20 March 2026, which can be found at: <https://www.dmo.gov.uk/media/zdebgm25/pr200326.pdf>.

Annex C: Financing arithmetic in 2025-26 and 2026-27

£ billion	2025-26	2026-27
CGNCR (ex NRAM, B&B, and NR) ¹	135.9	137.2
Gilt redemptions ²	168.2	140.2
Redemption of the sovereign Sukuk	0.0	0.5
Financing of gilt secondary market purchases in the previous financial year	0.0	0.7
Financing adjustment carried forward from previous financial years ³	11.6	-10.6
Gross Financing Requirement	315.7	268.0
Less:		
NS&I net financing	12.1	15.0
NS&I Green Savings Bonds	-0.4	0.2
Other financing ⁴	-0.7	1.5
Net Financing Requirement (NFR) for the DMO	304.6	251.2
DMO's NFR will be financed through:		
Gilt sales, through sales of:		
- Short conventional gilts	136.8	95.0
- Medium conventional gilts (including green gilts) ⁵	103.4	76.0
- Long conventional gilts (including green gilts) ⁶	32.7	22.4
- Index-linked gilts	31.1	23.0
- Unallocated amount of gilts	0.0	29.8
Total gilt sales for debt financing	303.9	246.2
Total net contribution of Treasury bills for debt financing	11.3	5.0
Total financing	315.2	251.2
DMO net cash position	12.9	2.3

Figures may not sum due to rounding.

¹ Central Government Net Cash Requirement (excluding NRAM Ltd, Bradford & Bingley, and Network Rail).

² Gilt redemptions do not reflect the full value of inflation uplift on index-linked gilts because accrued inflation uplift on any redeeming gilts is split between redemptions and the CGNCR. Specifically, where an index-linked gilt is re-opened (following an initial issue), any inflation uplift on that gilt accrued before the re-opening will be treated as principal (and therefore part of the redemption total). Any inflation uplift that occurs after the re-opening of the gilt will be included within the CGNCR for the year in which the gilt matures.

³ The £11.6 billion adjustment in 2025-26 carried forward from previous years reflects the 2024-25 CGNCR (ex NRAM, B&B, and NR), as first published on 23 April 2025. The -£10.6 billion adjustment in 2026-27 is the amount required to restore the DMO net cash position at end-March 2027 to £2.3 billion.

⁴ This financing item is typically comprised of estimated income from coinage and unhedged reserves.

⁵ Including green gilt sales of £8.3 billion in 2025-26 and planned green gilt sales in 2026-27.

⁶ Including green gilt sales of £1.6 billion in 2025-26.

Annex D: Illustrative gross financing projections from 2027-28 to 2030-31

£ billion	2027-28	2028-29	2029-30	2030-31
CGNCR (ex NRAM, B&B, and NR)	145.1	138.4	93.2	105.9
Gilt redemptions	162.6	147.9	146.2	105.7
Illustrative gross financing requirement	307.6	286.3	239.4	211.6

Figures may not sum due to rounding.

The table above shows illustrative annual gross financing projections from 2027-28 to 2030-31 using the OBR's updated projections of the CGNCR (ex NRAM, B&B, and NR), together with estimates of gilt redemptions in these years as at Spring Forecast 2026¹⁷. These projections are not forecasts of future gilt sales. Rather, they provide a broad indication of future finance to be raised through a combination of gilt sales, Treasury bills, NS&I and other financing sources.

¹⁷ To the extent that issuance takes place in future of gilts that redeem in any of the financial years covered in Annex D, the redemption totals for the relevant financial years will increase accordingly. In financial years in which index-linked gilt redemptions take place, the nominal amount in issue (excluding any government holdings) will form part of the redemption total, whereas the inflation uplift will be split between the redemption total and the CGNCR (ex NRAM, B&B, and NR).
