Note:

1. Conventional gilts are auctioned on a multiple price basis, while index-linked gilts are auctioned on a uniform price basis. As a result, for index-linked gilt auctions there is no tail and the prices and yields are based on the strike price. For index-linked gilts with a 3-month indexation lag the clean price shown is the real clean price i.e. it is the price excluding any inflation uplift. Tail figures for conventional gilt auctions from November 1998 have been calculated from unrounded yields.
2. CRND (Commissioners for the Reduction of the National Debt) purchases of gilts are made at the Average Accepted Price (AAP) and do not contribute to financing.
3. For conventional gilts the yield shown is a nominal yield, while for index-linked gilts it is a real yield. For index-linked gilts with an 8-month indexation lag the yield is computed using a 3% inflation assumption, while for index-linked gilts with a 3-month indexation lag the yield does not depend on an inflation assumption.
4. Yield at Average Accepted Price (AAP) prior to November 1998 are only available to 2 d.p. and Yield Tail is only available as an integer.
5. In 2009-10, starting with the auction on 1 June 2009, the DMO has offered an option to successful bidders at auctions to purchase additional stock which will be available to successful bidders at the average accepted (or strike) price at the auction.
6. PAOF is the Post Auction Option Facility which was introduced at outright gilt auctions from 1 June 2009. Under the option, successful bidders can purchase (at the average accepted/strike price established at the auction) an additional amount of the stock allocated to them. Where there is a take-up of the PAOF the amount issued will change on that day and will be final by the close of business. Where there is no link displayed to a PAOF release, there was no take-up of the facility on that auction.
